To, The Recruitment Manager
WorldQuant

Respected Sir/Ma'am,

I am writing to apply for the Quantitative Research Intern internship advertised on the WorldQuant job portal. I think my skills, as outlined in my resume, make me an ideal candidate for this program.

In my Bachelor of Technology (CSE) programme at Amity University and through the numerous online resources I follow, I've completed a great deal of coursework on Data Mining, Data Science, iOS Development and Object-Oriented Programming.

Online certifications, MOOCs and academic coursework have laid the foundations of my career. I have had experience working in R, Swift and Python through these channels of knowledge. I am proficient in Machine Learning, Financial Modelling, Blockchain Development and passionate about deriving insights from data.

I've had the privilege of working as a Data Analyst in various companies, and being selected as one of the ten AI engineers by Technical University of Munich and UnternehmerTUM for Digital Product School in their upcoming batch. In my past experiences, I've constantly worked towards extracting human-centric insights from data, and I'm looking forward to doing the same in my future endeavours.

Additionally, I believe that my experience with iOS Development and my know-how of design and prototyping would make me an excellent addition to a cross-functional team.

I aspire to continue my education in this field by pursuing a graduate degree right after my Bachelor programme. This program would be a vital addition in my learning umbrella, providing me with industry experience.

Sincerely,

Utkarsh Sharma
